

 **DATASHEET** (IT Infrastructure Monitoring)

# MQ Manager

IBM WebSphere MQ guarantees data delivery as messages, but any number of things can go wrong during the process. When they do, you need way to immediately detect bottlenecks and identify problems that could prevent data from reaching its destination.

Monitoring the performance and availability of IBM WebSphere MQ allows you to proactively check for impending issues, trigger notifications, and take action to minimize business risk.

MQ Manager continuously and automatically monitors the seven key components of IBM WebSphere MQ in order to ensure the flow of data is not disrupted, prevent costly downtime, free up IT resources, and reduce operational cost—no scripting or specialist knowledge required.

## Quick and Easy Deployment

You can install and deploy MQ Manager in minutes thanks to the pre-configured template that implements standard monitoring rules for IBM WebSphere MQ. Get up and running right out of the box or make adjustments to suit the specific needs of your environment.

## Graphical MQ Monitoring

The unique web-based interface allow you to customize multiple screens with views for monitoring all attributes of MQ Queue Managers and message queues across your IBM i environment. Even connect to the Enterprise Console GUI to view your entire enterprise regardless of platform. Monitor remotely, receive notifications, and respond to issues from your preferred mobile device.

## Let's Get Started

Seeing MQ Manager in action will help you determine how proactive IBM WebSphere MQ monitoring can save you time and money. Visit us at [www.helpsystems.com/cta/request-live-mq-manager-demonstration](http://www.helpsystems.com/cta/request-live-mq-manager-demonstration) to arrange your demo.

## PRODUCT SUMMARY

### KEY FEATURES

- Queue Managers
- Queues
- Channels
- Listeners
- Cluster Queue Managers
- Services
- MQ Events

### KEY INTEGRATIONS

- Systems Operations Suite (Level 2)
- Advanced Automation Suite (Level 3)
- Operations Center Suite (Level 4)
- Enterprise Console

### SYSTEM REQUIREMENTS

IBM i 7.1 or higher

### About HelpSystems

HelpSystems is a leading provider of systems & network management, business intelligence, and security & compliance software. We help businesses reduce data center costs by improving operational control and delivery of IT services.
