Sequel Web Interface

Make Real-Time Business Decisions, Wherever You Are

Sequel Web Interface (SWI) is the easiest, most cost-effective way to access and work with Sequel objects. Access your dashboards, views, reports, tables, scripts, and applications—all from a web browser. Plus, use SWI to display results, download data to your PC, print, email, and so much more

Access Data with Zero Footprint

With Sequel Web Interface, there's no need to install any software. Spread the power of Sequel throughout your organization by giving users access to the easy-to-use web interface. All your users need is a supported web browser: Internet Explorer, Safari, Firefox, or Chrome.

Take Your Data with You—Wherever You Go

Sequel Web Interface is a friendly, intuitive interface that gives you easy, single-click access to Sequel objects. Since SWI works on any web browser, you can take your Sequel data with you wherever you go and access it on any mobile device.

Keep the Power of Sequel

Just because Sequel Web Interface doesn't require a software installation doesn't mean it's not powerful. In fact, SWI gives users the full power of Sequel—but in a portable form. Use SWI to:

- View vibrant data dashboards
- Display results quickly and securely, even from multiple tabs
- Download and save data in various file formats
- Send data as email attachments
- Perform drill-down and graphing operations on the fly
- Display, print, save, and email views, host tables, host reports, client reports, and client tables
- Launch scripts and drill-down applications with a click
- Calculate subtotals right from the browser
- Create a repository tree to give users long-name descriptive shortcuts to reports, PC files, or scheduled jobs
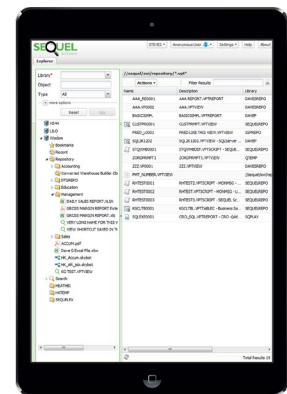

PRODUCT SUMMARY

KEY FEATURES

- Zero footprint: no software to install
- Browser-based data access on any mobile device
- Full power of Sequel
- Customizable executive dashboards
- Secure data access

SYSTEM REQUIREMENTS

Web browser (Internet Explorer, Firefox, Safari, or Chrome)

Access key business data on the go.

Provide long-name shortcuts with a repository tree.

Do More with Your Data

Sequel Web Interface offers more options than ever for accessing, formatting, and sharing valuable data. With SWI, you can:

- Embed links to run Sequel objects from your webpages
- Display a list of existing Sequel and Query/400 objects in a library
- Manage spooled files by user profile or by output queue
- Interact with client tables (pivot tables) dynamically with drag-and-drop formatting and reorganization

SWI even builds the library list dynamically, so all you have to do is click an object name to run a request.
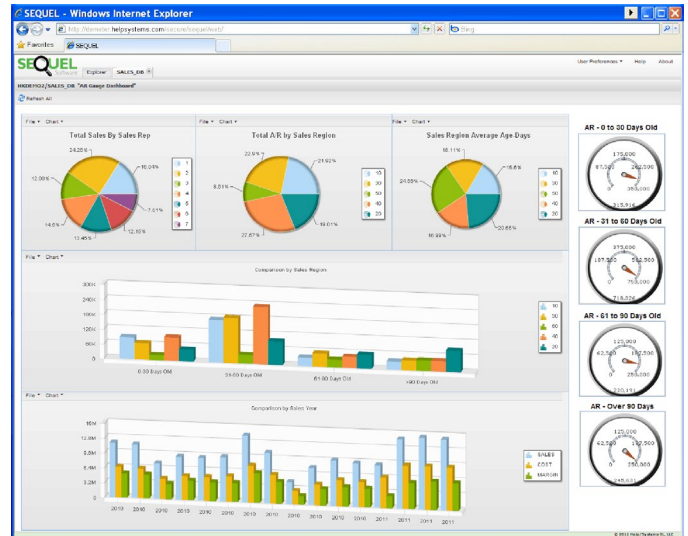

Customize Your Data Display

Using Sequel Web Interface, XML, and XSL, you can access IBM i data from your browser in the format of your choice. With a single XSL style sheet, you can include XML data results from multiple Sequel views, graphics, hyperlinks, and texts on a results page.

## Secure Data Access for Your Organization

With Sequel Web Interface, access to your Sequel objects and data is secure. You can choose to require users to log into SWI with a valid IBM i user ID and password. To further enhance security, the application will observe all IBM i object-level authority. **The result is flexible, secure, and cost-effective access to your data.**

Get Started

Ready to try Sequel Web Interface for yourself? Contact your sales rep or email sales.sequel@helpsystems.com to set up your free 30-day trial.

Display dashboards containing graphics, charts, and gauges in a separate browser tab.

Use XML/XSL to format IBM i data with graphics and other design elements to present information any way you want.
